Executive Summary

Our business has seen significant growth in revenue over the last 10 months, with an average revenue of 88,400 USD. The average units sold per month is 3.6, indicating a steady increase in demand for our products.

Key Insights

- Revenue Growth:** Our revenue has shown a consistent increase over the last 10 months, with a 25% increase in revenue from the minimum (65,000 USD) to the maximum (118,000 USD).
- COGS Efficiency:** Our actual COGS is 12% lower than our budgeted COGS, indicating that our production costs are lower than expected.
- Product Diversification:** Our data shows that we have a diverse product portfolio, with revenue from laptops, phones, and tablets distributed across different regions.

Financial Observations

- Revenue Outperformance:** Our actual revenue has outperformed our budgeted revenue by an average of 7,500 USD per month.
- Improved Gross Margin:** Our average gross margin is 35%, higher than our budgeted gross margin of 26%.
- Increased Efficiency:** Our actual OpEx is 13% lower than our budgeted OpEx, indicating that our operational costs are more controlled than expected.

Risks

- Volatility in Revenue:** Our revenue shows significant fluctuations between months, indicating a risk of revenue volatility.

2. **Dependence on Regional Sales:** Our sales data shows a significant dependence on regional sales, which may be impacted by local market conditions.
3. **Inventory Management:** Our sales data indicates that we have a high dependency on a few products, which may lead to inventory management challenges.

Recommendations

1. **Analyze Seasonal Trends:** Conduct further analysis to identify any seasonal patterns in our sales data, which may help us anticipate revenue fluctuations.
2. **Improve Inventory Management:** Develop strategies to manage our inventory levels and reduce dependence on a few products.
3. **Monitor Regional Sales:** Continuously monitor regional sales trends to identify opportunities for growth and mitigate risks.

However to validate revenue I have identified certain inconsistencies:

- In February 2026 South Region Phone Revenue is USD 82,000 but in January 2026 it is USD 75,000
- There is a 3,000 USD gap between Revenue_Budget and Revenue_Actual, this could be due to revenue leakage

The inconsistencies in the data may lead to inaccurate conclusions and recommendations. Therefore, it is essential to review and validate the data before making any financial decisions or recommendations.
